

DO YOU KNOW WHAT THIS IS ?

THIS IS HOW WE USED TO PROVIDE FIRE PROTECTION.

THIS IS HOW WE STILL PROVIDE HEALTH CARE INSURANCE !!!!

This is what is called a 'fire mark'. Well into the 1800's this is the way people got fire protection. You would purchase fire insurance from a private company and they would provide you with their "fire mark" which you would hang on your house/building . If you had a fire in your house / building, the fire brigade would show up and if you had a fire mark they would put the fire out. If not, they would let your house / building burn. This seems pretty absurd today!

But this is the way we provide health insurance today. Some day folks will look back at the way we provide health insurance today with the incredulity that we look back at the way they used to provide fire protection. As a matter of fact the rest of the developed world has already come to the conclusion that health care, like fire protection, should be provided as right of residency. It is time for the U.S. to catch up with the rest of the developed world and **New Mexico can lead the way.**
